

What Would Be the Reproduction Rate of Immortal Chickens If They Were Fruitful and Multiplied?

Then God said, "Let the waters teem with swarms of living creatures, and **let birds fly above the earth in the open expanse of the heavens.**" **God created** the great sea monsters and every living creature that moves, with which the waters swarmed after their kind, and **every winged bird after its kind; and God saw that it was good. God blessed them, saying,** "Be fruitful and multiply, and fill the waters in the seas, and **let birds multiply on the earth.**" (Gen 1:20-22)

Reproduction Rate of Chickens

Females Can breed at	5 months
Gestation Period	21 days
Possible Eggs per day	1
Per Cent Female	50%

In seven generations of immortal chickens one initial pair could produce over 689,000 chickens per square mile of the earth's dry land (including Antarctica).
